ALAYNA JOHNSTON

FULL-STACK SOFTWARE ENGINEER | USER-FACING PRODUCTS

Chicago, IL | alaynajohnston12@gmail.com
linkedin.com/in/alaynajohnston98 | alaynajohnston.netlify.app | github.com/ayyjayy2

SUMMARY

Software engineer with 5+ years of experience across enterprise development and independently built products. Delivers features across Angular interfaces, Java services, and databases on a healthcare platform processing 100M+ records daily. Builds responsive web and iOS experiences, with strengths in feature ownership, production troubleshooting, and application security.

TECHNICAL SKILLS

Frontend & Mobile: TypeScript, JavaScript, Angular, RxJS, HTML/CSS, Capacitor (iOS), PWAs
Backend & Data: Java, Spring Boot, REST APIs, Firebase, Firestore, SQL, Oracle, GCP BigQuery
Delivery: Git, GitHub, Jenkins, GitHub Actions, Playwright, unit testing, security-rules testing
Development Tools: Jira, Swagger, Insomnia, Claude Code, GitHub Copilot

PROFESSIONAL EXPERIENCE

Associate Software Engineer | Surescripts, LLC

Remote | March 2022 - Present

- Owned delivery of a configuration management feature on an internal microsite: authored the UX design spike and implemented 12 of 15 stories across an Angular interface and Java microservice.
- Delivered 20 of 36 stories in the primary epic of a year-long patient privacy initiative across an Angular UI, Java REST services, and a record-linkage database; authored design and test-case documentation.
- Led root cause analysis of a production search outage, identifying an unsafe database configuration default. Audited 40+ service configurations, found a second affected service, and shipped fixes for both.
- Developed Java and SQL functionality for patient demographic matching and audit search across Oracle and GCP data environments.
- Created shared release-branch automation with regression checks and wrote 33 engineering guides covering application setup, security scanning, and deployment troubleshooting.
- Reviewed 546 peer pull requests and contributed across 65 repositories; investigated technical unknowns through 32 spikes to inform implementation decisions.

Software Engineer | Tata Consultancy Services

Remote | January 2021 - March 2022

- Completed full-stack engineering training and built web applications using Angular, Java, Spring Boot, and REST APIs in an Agile environment.
- Completed big data training covering Apache Spark, Kafka, MySQL, and Scala.

SELECTED PROJECT

The Itinerists | Founder & Developer | theitinerists.com

Angular, TypeScript, Firebase/Firestore, Capacitor, Leaflet, Playwright, GitHub Actions

- Architected and built a collaborative travel planner for itineraries, flights, stays, maps, packing, and shared expenses. Delivered a responsive web app and Capacitor-based iOS build; alpha tested by 12 users across three real trips.
- Reduced median sign-in-to-home time by 28% (1.82s to 1.31s) through profiling, prefetching, and UI state improvements, measured on a simulated iPhone over a 4G connection.
- Built CI checks with 375 unit tests, 158 Firestore security-rules tests, and 20 end-to-end tests. Enforced Firebase App Check and trip access controls with positive and negative test cases.
- Implemented expense conversion using payment-date exchange rates and net balance calculations; tested flight time-zone handling across 418 IANA zones.

EDUCATION

B.S. Information Systems | Coastal Carolina University | 2020
Minor: French | Study abroad: Mahidol University International College, Thailand (2019)
Capstone: French language-learning application built with Visual Basic in Visual Studio.
Academic scholarships before and during enrollment, including a Computer Science-specific scholarship.
